Power and Energy Management Overview

Which PowerMonitor product suits your application?

Are you interested in power and energy management, power quality management, or both?

Power Management

- Do you have an energy savings initiative within your company?
- Do your utility bills currently exceed \$100,000 a month?
- Is energy more than 15% of your operating costs?
- Do you plan to buy electricity in the competitive market?
- Do you want to understand where your energy is consumed?

Power Quality Management

- Do you have unplanned downtime?
- How much are you spending on downtime?
- Are you able to identify the cause of downtime?
- Are there electronics failing in your facility with no known cause?
- Do you have a good understanding of the power quality in your plant?

If you answered yes to any of these questions, we can provide a solution.

Power Management Metering

The PowerMonitor 500 unit and the PowerMonitor 1000 unit provide a power management metering option. These meter options provide a solution for customers who are in these situations:

- You are beginning an energy savings initiative.
- You notice a spike in utility bills.
- You need demand and consumption measured.
- You have meters implemented currently and are looking for a sub-metering option.
- You want to monitor individual processes and subprocesses.
- You want to communicate this metered data back to your network via optional communication (Ethernet/IP or Serial).

Wireless Power Management Metering

Does a basic metering option suit your needs; however, a wireless option would be more useful due to ease of installation and eliminated networking costs?

The PowerMonitor W250 unit provides consumption and demand data with wireless communication (with FactoryTalk EnergyMetrix software).

Power Quality and Power Management Metering

Do you need a more advanced metering option with power quality features?

Do you require Class 0.2 Revenue Grade Accuracy?

Do you have compliance initiatives within your organization?

Do you require waveform capture or advanced PQ measurements?

Choose the PowerMonitor 5000 unit if you are in one or more of these areas:

- Systems integrators focusing on a power quality and/or total system energy projects
- Semi-conductor industry
- Customers with power quality issues
- Lighting industry
- Monitoring main incoming power to the facility

Bulletin 1426 - PowerMonitor 5000 Unit

Overview

Do you need a more advanced metering option with power quality features?

Do you have compliance initiatives within your organization?

The PowerMonitor 5000 unit is the next generation of high-end electric metering products from Rockwell Automation. This new family of meters provides advanced technology, new functionality, faster response, and superior accuracy. The M5 model is the base version and provides an extensive range of metering functionality. The PowerMonitor 5000 unit communicates power and energy parameters to controllers, HMI software, and applications such as FactoryTalk EnergyMetrix software over the Ethernet network or other optional networks. The PowerMonitor 5000 unit works with controllers or software applications to address key customer applications including the following:

- Load profiling
- Cost allocation
- Billing and sub-billing
- Power system monitoring and control
- Demand management
- Demand response

CE Certification	If this product bears the CE marking, it is approved for installation within the European Union and EEA regions. It has been designed to meet the following directives.

Bulletin 1420 - PowerMonitor 500 Unit

Overview

The PowerMonitor 500 unit is an AC power monitor with a built-in advanced configuration system and LCD data display. The unit is designed for measurement of electrical parameters in a variety of three-phase and single-phase circuits. The unit is enclosed in a modular housing for panel mounting, with IP65 degree of protection in front of the panel. The power monitor can be provided with analog or digital outputs. These outputs can be selected to output a pulse proportional to the real and reactive energy measured, or to annunciate alarms. The instrument can also be equipped with a serial RS-485/RS-232 port, an EtherNet/IP port, and analog outputs.

Equipped with an optional communication port, the unit communicates power and energy parameters to applications, such as FactoryTalk EnergyMetrix software. The power monitor works with these software applications to address these key customer applications:

- **Load profiling** - log power parameters, such as real energy, apparent power, and demand, for analysis of power usage by loads over time
- **Cost allocation** - reporting actual energy cost by department or process to integrate energy information into management decisions
- **Billing and sub-billing** - charging users of energy the actual usage cost rather than allocating by square footage or other arbitrary methods
- **Power system monitoring and control** - display and control power flow and energy utilization

Pollution degree	2
Front	IP65, NEMA4x, NEMA12
Screw terminals	IP20
Weight, approx	400 g (0.88 lb) (packing included)

Bulletin 1408 - PowerMonitor 1000 Unit

Overview

The PowerMonitor 1000 unit is a compact, cost-effective, electric power and energy metering device intended for use in industrial control applications, such as distribution centers, industrial control panels, and motor control centers. The power monitor measures voltage and current in an electrical circuit, meeting revenue accuracy standards. The power monitor communicates power and energy parameters to applications, such as FactoryTalk EnergyMetrix, over Ethernet or serial networks. The power monitor works with these software applications to address the following key customer applications:

- **Load profiling** – log power parameters, such as real power, apparent power, and demand, for analysis of power usage by loads over time
- **Cost allocation** – reporting actual energy cost by department or process to integrate energy information into management decisions
- **Billing and sub-billing** – charging users of energy the actual usage cost rather than allocating by square footage or other arbitrary methods
- **Power system monitoring and control** – display and control power flow and energy utilization

Bulletin 1425 - PowerMonitor W250 Unit

Overview

The PowerMonitor W250 family includes a selection of power monitors, receivers, and routers that communicate wirelessly in a mesh arrangement designed for robust, reliable energy data collection.

The PowerMonitor W250 unit consists of three main parts:

- **Wireless power monitor** - The PowerMonitor W250 unit is a sub-meter that measures and calculates several electrical parameters. The unit is equipped with pre-wired split core current transformers or Rogowski coils and embedded wireless data transmission capabilities.
- **Wireless PC receiver** - The receiver is a standalone gateway that manages the wireless network and collects data periodically sent by PowerMonitor W250 units. The receiver transmits data through its serial port to the data logging system for analysis. An optional, user-provided serial to Ethernet converter connects the receiver to your local area network.
- **Wireless router** - The router is a repeater that extends the distance of the wireless transmission range and can provide multiple signal paths between the PowerMonitor W250 unit and the receiver when needed.

Features

Does a basic metering option suit your needs; however, a wireless option would be more useful due to ease of installation and eliminated networking costs?

PowerMonitor W250 Unit Features

Feature	Availability

Specifications

PowerMonitor W250, Line Powered up to 300V AC rms

Attribute	Value
Primary nom current	20 . . . 2000 A (depending on the model)
Primary voltage, measuring range (neutral/phase) (VPN)	90 . . . 300V rms
Primary voltage, nom range (N/L) (VPN)	100 . . . 272V rms
Absolute min/max input voltage (N/L)	90 . . . 300V rms
Frequency	50/60 Hz
Power consumption, max	2W
Supply current, max (N-L1)	0.2 A rms
Temperature, ambient operating (90% rH) (TA)	-10 . . . 55 °C (14 . . . 131 °F)
Altitude	Up to 2000 m (6562 ft)
Protection degree	IP2X (for indoor use only)
Pollution degree	PD2
Isolation	Isolation class II
IEC 61010-1 CAT III	300V rms

Bulletin 1412 - PowerPad Portable Power Monitor

Overview

The PowerPad power monitor is a three-phase power quality analyzer that is easy-to-use, compact, and shock-resistant. It is intended for technicians and engineers to measure and carry out diagnostic work on one-, two-, or three-phase low voltage networks.

You can obtain instant waveforms of an electrical network's principal characteristics, and also monitor their variation over a period of time. The multi-tasking measurement system simultaneously handles all of the measurement functions of the various magnitudes, detection, continuous recordings, and their display without any constraints.

Features

The PowerPad power monitor has the following features:

- Measurement of rms voltages up to 480V (phase-to-neutral) or 830V (phase-to-phase) for two, three, or four-wire systems
- Measurement of rms currents up to 6500 A rms
- Frequency measurement (10...70 Hz systems)
- Calculation of neutral current for wye configurations
- Calculation of Crest Factors for current and voltage
- Calculation of the K Factor for transformers
- Calculation of short-term flicker for voltage
- Calculation of the phase unbalance for voltage and current (3 phase systems only)
- Measurement of harmonic angles and rates (referenced to the fundamental or rms value) for voltage, current or power, up to 50th harmonic
- Calculation of overall harmonic distortion factors
- Monitoring of the average value of any parameter, calculated over a period running from 5 seconds to 2 hrs
- Measurement of active, reactive, and apparent power per phase and their respective sum total
- Calculation of the power factor, displacement power factor, and tangent factor
- Total power from a point in time, chosen by the operator
- Recording, time stamping, and characterization of disturbance (swells, sags, and interruptions, exceeding power and harmonic thresholds)
- Detection of transients and recording of associated waveforms

1412-PP2127-51	PowerPad portable power monitor with 36 in. AmpFlex 193-36 6500 A current probes

Specifications

General Specifications

Attribute	Reference Conditions
Temperature, ambient	23 °C \pm 3 °C (73 °F \pm 5 °F)
Humidity	45%
Atmospheric pressure	25.4 . . . 31.3 in. Hg (860 . . . 1060 hPa)
Phase voltage	230V rms and 110V rms \pm 2% without DC
Clamp current circuit input voltage	0.03 . . . 1V rms without DC ($<$ 0.5%)
AmpFlex current circuit input voltage	11.8 . . . 118 mV rms without DC ($<$ 0.5%)
Frequency of electricity network	50 and 60 Hz \pm 0.1 Hz
V/I phase shift	0° active power / 90° reactive power
Harmonics	$<$ 0.1%

Mechanical Specifications

Attribute	Value
Dimensions, approx	240 x 180 x 55 mm (9.5 x 7.0 x 2.0 in.)
Weight, approx	2.1 kg (4.6 lb)
Altitude, operating	0 . . . 2000 m (6560 ft)
Altitude, nonoperating	0 . . . 10,000 m (32,800 ft)

Voltage Inputs

Attribute	Value
Operating range	Phase-Phase - 960V rms AC/DC Phase-Neutral 480V rms AC/DC
Input impedance	340 k: between phase and neutral
Overload	1.2Vn permanently; 2Vn for 1 s (Vn = nom voltage)

Current Inputs

Attribute	Value
Operating range	0 . . . 1V
Input impedance	100 k: for current probe circuit and 12.4 k: for AmpFlex circuit
Overload	1.7V

Safety Compatibility

Specifi ation	Value
Electrical safety (per EN 61010-1)	Double insulation 600V rms, Category III, Pollution Degree 2

Electromagnetic Compatibility

Immunity and emission	EN 61236-1 amendment 1
Electrostatic discharges	IEC 1000-4-2
Radiation field resistance	IEC 1000-4-3
Fast transients resistance	IEC 1000-4-4
Electric shock resistance	IEC 1000-4-5
Conducted RF interference	IEC 1000-4-6

Mechanical Protection

Shock and vibration	EN 61010-1

Bulletin 1407 - Combination Generator Control Module

Overview

The Combination Generator Control Module (catalog number 1407-CGCM) is a programmable automatic generator controller that maintains the generator output voltage within specific limits by controlling the current applied to the exciter field of the generator. The controller consists of a single design to regulate brush-less permanent magnet excited generators and brush-less self excited generators.

The CGCM performs voltage regulation via control of exciter field current provided to the generator stator.

Product Selection

The Combination Generator Control Module is a product specifically designed to protect and synchronize generators in control applications. This includes generator protection, excitation control, synchronization control, and full-function metering.

Cat. No.	Description
1407-CGCM	Combination Generator Control Module

Features

The CGCM has the following features.

Generator Regulation and Control Functions

- Four excitation control modes
- Automatic voltage regulation (AVR)
- Manual or field current regulation (FCR)
- Power factor (PF)
- Reactive power (VAR)
- Soft start voltage buildup with an adjustable ramp in AVR and FCR control modes
- Overexcitation (OEL) and underexcitation (UEL) limiting in AVR, VAR, and PF control modes
- Underfrequency compensation (Volts/Hertz)
- Line Drop Compensation
- Auto-tracking between operating modes and between redundant CGCM units
- Automatic transfer to a backup CGCM unit in redundant systems
- Generator paralleling with reactive droop compensation or crosscurrent (reactive differential) compensation
- Generator paralleling with real power load sharing
- Synchronizing for 1 or 2 circuit breakers

Generator Protection Functions

- Loss of excitation current (40)
- Overexcitation voltage (59F)
- Generator overvoltage (59)
- Generator undervoltage (27)
- Loss of sensing (60FL)
- Loss of permanent magnet generator (PMG/Excitation power) (27)
- Reverse VAR (40Q)
- Overfrequency (81O)
- Underfrequency (81U)
- Reverse power (32R)
- Rotating diode monitor
- Phase rotation error (47)
- Generator overcurrent (51)

Metering Functions

- Voltage
- Current
- Frequency
- Real power
- Apparent power
- Reactive power
- Power factor
- Real energy (kWh)
- Apparent energy (kVAh)
- Reactive energy (kVARh)
- Controller excitation current and voltage
- Diode monitor ripple level
- Load share error
- Synchronization parameters

Inputs and Outputs

Inputs

- Single-phase or three-phase true rms generator voltage sensing
- Single-phase dual bus or three-phase single bus voltage sensing
- Three-phase generator current sensing (1 or 5 A nominal)
- Single-phase cross current loop 1 or 5 A current transformer (CT) input
- Auxiliary $\pm 10\text{V}$ DC input providing remote control of the setpoints
- DC power input

Outputs

- Pulse-width modulated output power stage rated at 15 A
- Discrete redundancy relay output
- Discrete fault output driver
- Load sharing connection for use with Allen-Bradley® 1402-LSM Line Synchronization Module or compatible hardware

Communication Interfaces

The CGCM has three communication ports:

- Redundant ControlNet connector
- RS-232 port for dedicated communication with a redundant CGCM
- RS-232 port for factory configuration and test (not for customer use)

Specifications

Control Power

Supply	Burden
18...32V DC (24V DC nom)	30 W
AC ripple, max	50%, 50...120 Hz

Operating Power Requirements

Source	Phases	Wiring Configuration	Voltage	Frequency	VA (max)
PMG ⁽¹⁾	1-phase	PMG-A and PMG-C	79V rms, min 300V rms, max	50 Hz, min 240 Hz, max	3070
PMG	3-phase	Floating wye	137V rms L-L, min 300V rms L-L, max	50 Hz, min 240 Hz, max	3070
SE ⁽²⁾	1-phase	PMG-A and PMG-C	79V rms, min 300V rms, max	50 Hz, min 240 Hz, max	3070
SE	3-phase	Floating wye	137V rms L-L, min 300V rms L-L, max	50 Hz, min 240 Hz, max	3070
SE	3-phase	Grounded wye (Grounded neutral)	137V rms L-L, min 300V rms L-L, max	50 Hz, min 240 Hz, max	3070
SE	3-phase	Floating delta	137V rms L-L, min 300V rms L-L, max	50 Hz, min 240 Hz, max	3070
SE	3-phase	Open delta, floating	137V rms L-L, min 300V rms L-L, max	50 Hz, min 240 Hz, max	3070

(1) PMG = Permanent Magnet Generator

(2) SE = Separately Excited

Generator Voltage Sensing Values

Phase	Wiring Configuration	Grounded Connection Available	Voltage	Frequency
1-phase	V Gen A and V Gen C	No	57V rms, min 150V rms, max	20 Hz, min 90 Hz, max
3-phase	Floating wye	No	99V rms L-L, min 208V rms L-L, max	20 Hz, min 90 Hz, max
3-phase	Grounded wye (grounded neutral)	Yes	99V rms L-L, min 208V rms L-L, max	20 Hz, min 90 Hz, max
3-phase	Open delta, grounded 'B' phase	Yes	99V rms L-L, min 150V rms L-L, max	20 Hz, min 90 Hz, max

Generator Current Sensing

Attribute	Value
Type	3-phase plus cross current compensation input
Frequency	50/60 Hz
Range	1 A or 5 A max continuous
Burden	<0.1VA per phase for metering CTs <2.5VA per phase for cross current inputs

Bus Voltage Sensing Values

Phase	Wiring Configurations	Grounded Connection Available	Voltage	Frequency
1-phase	V Bus A and V Bus C	No	57V rms, min 150V rms, max	20 Hz, min 90 Hz, max
3-phase	Floating wye	No	99V rms L-L, min 208V rms L-L, max	20 Hz, min 90 Hz, max
3-phase	Grounded wye (Grounded neutral)	Yes	99V rms L-L, min 208V rms L-L, max	20 Hz, min 90 Hz, max
3-phase	Open delta, grounded 'B' phase	Yes	99V rms L-L, min 150V rms L-L, max	20 Hz, min 90 Hz, max

Voltage Input

Attribute	Value
Range	-10 ... 10V DC
Input impedance	20k Ω

Bulletin 9307 - Power Management Software

Overview

Power and Energy Management software is available for simple and complex systems. This software helps you configure our products and access energy data in real time.

Our software also lets you capture, analyze, store, and share energy data across your entire enterprise through standard web browsers. This makes it easy for you to acquire and distribute the knowledge you need to optimize energy consumption and improve productivity while lowering energy costs.

FactoryTalk EnergyMetrix Software

FactoryTalk EnergyMetrix software is sophisticated, web-enabled energy management software that puts critical energy information at your desktop. The FactoryTalk EnergyMetrix software suite combines data communication, client-server applications, and the Microsoft advanced .Net web technology to provide you with a complete energy management solution. FactoryTalk EnergyMetrix software captures, analyzes, stores, and shares energy data across your entire enterprise. By using a web browser, your energy information is now available on your company's LAN or WAN, presenting you with the knowledge necessary to optimize your energy consumption. The net result is improved productivity and lower energy costs.

Selection Comparison

Application	FactoryTalk EnergyMetrix	RSView®
Load profiling	X	
Cost allocation	X	X
Power quality monitoring	X	X
Distribution system monitoring	X	X
Demand management	X	X
Energy load shedding	X	X
Power system control	X	X

FactoryTalk EnergyMetrix

Description	Cat. No.
FactoryTalk EnergyMetrix Manager with standard reports and charting capability. Includes 10 meters that can be used in any combination of Allen-Bradley meters and OPC. No SQL license.	9307-FTEMMENE
FactoryTalk EnergyMetrix Manager with standard reports and charting capability. Includes 10 meters that can be used in any combination of Allen-Bradley meters and OPC. Single Client SQL license.	9307-FTEMMDBCENE
FactoryTalk EnergyMetrix Manager with standard reports and charting capability. Includes 10 meters that can be used in any combination of Allen-Bradley meters and OPC. Unlimited Client SQL license.	9307-FTEMMDBPENE
FactoryTalk EnergyMetrix OPC license. Allows for use of OPC with manager above 10 meters. OPC meters are unlimited with this license but require purchase of additional meter bundles.	9307-FTEMOPC
FactoryTalk EnergyMetrix Real Time	9307-FTEMRT
FactoryTalk EnergyMetrix Charts Plus	9307-FTEMCHT
FactoryTalk EnergyMetrix Reports Plus	9307-FTEMRPT
FactoryTalk EnergyMetrix Bundle of 10 meters, requires Manager	9307-FTEM10
FactoryTalk EnergyMetrix Bundle of 50 meters, requires Manager	9307-FTEM50
FactoryTalk EnergyMetrix Bundle of 100 meters, requires Manager	9307-FTEM100
FactoryTalk EnergyMetrix Bundle of 500 meters, requires Manager	9307-FTEM500

Features

FactoryTalk EnergyMetrix Software

Base Package: FactoryTalk EnergyMetrix Manager

- Base package
- Set up groups, domains, roles, users, devices, meters
- Log data from Allen-Bradley devices
- Basic reports and charts
- Rate schedules and billing reports
- 10, 50, 100, or 500 meter licensing

Offered with or without Microsoft SQL Server 2005 Runtime license

Optional Packages

FactoryTalk EnergyMetrix ReportsPlus	FactoryTalk EnergyMetrix ChartsPlus	FactoryTalk EnergyMetrix OPC Client	FactoryTalk EnergyMetrix RT
Optional package	Optional package	Optional package	Optional package
Enhanced reports	Enhanced charts	Enables OPC Client in Manager	Configure Allen-Bradley power monitors
	Flexible formatting tools for customizing	Requires customer provided OPC server	View real-time data from Allen-Bradley power monitors

Scalability

FactoryTalk EnergyMetrix software interfaces to your existing systems through standard protocols and has the scalability to add additional components while maintaining your original investments:

- FactoryTalk EnergyMetrix Manager: The core data logging, reporting, charting, and billing package. Manager is a server-based, web-enabled application that runs on a Windows 2008 server or workstation. Microsoft Internet Explorer accesses and configures Manager. FactoryTalk EnergyMetrix Manager is available with 10, 50, 100, or 500 meters licenses.
- FactoryTalk EnergyMetrix RT: The real-time communication, configuration, and data display package of FactoryTalk EnergyMetrix software. RT is available with FactoryTalk EnergyMetrix Manager or as a standalone package.
- FactoryTalk EnergyMetrix OPC Client: Provides connectivity to meters other than Allen-Bradley power monitors. Like Manager, the 3PX package is offered in 10, 50, 100, and 500 meter licenses.
- FactoryTalk EnergyMetrix ReportsPlus: Creates custom reports beyond the standard reports included with Manager.
- FactoryTalk EnergyMetrix ChartsPlus: Creates custom charting capabilities above the standard charts included with Manager.

Connectivity

Connect to metering points right from your desktop PC:

- Connectivity through RSLinx software: RS-232, RS-485, Ethernet, DeviceNet, remote I/O pass-thru, optical, and modem (RSLinx Lite software is included with the Manager package)
- Third-party connectivity - OPC

Configuration

FactoryTalk EnergyMetrix software provides easy and flexible configuration:

- Configure electricity, gas, water, and steam meters or any energy or production related inputs
- Configure manual meters as placeholders in the database for manual data entry
- Configure user-defined data sources, such as standard PLC-5® or SLC™ hardware types or Generic OPC
- Flexible configuration lets you do the following:
 - Name your devices
 - Name your groups
 - Create sub-groups
 - Put meters in multiple groupings for cost allocation
- Set and change meter configuration values remotely
- Multi-level password protection and privileges

Monitoring and Analysis

FactoryTalk EnergyMetrix software is a powerful load profiling, cost allocation, and billing analysis tool

- Log usage, cost, and power quality data
- View any parameter in real time
- Create historical trend reports and charts
- View historical trending of individual meters and groups and save tabular data for further processing and analysis
- Establish consumption baseline and user-defined time of use periods
- Create custom rate plans by using the rate plan menu and line item scripting
- Assign rate plans to meters or groups of meters
- Import and export rate schedules in XML format
- Create and print daily or monthly cost and billing reports by the following:
 - Meter
 - Business group
 - Department
 - Site
- Create energy budgets and forecasts
- Compare and contrast alternative utility rates; do 'what-if' for other rate structures
- Print and store all reports and charts

Guidelines for Server

- Windows 2003 Server or Windows 2008 Server, Application Server role. For 64-bit operating systems, RSLinx Classic software, version 2.57 CPR9 SR3 or later, must be installed. Windows 2000 Server is not supported.
- Microsoft SQL Server 2005 or 2008, installed with mixed-mode authentication (Windows and SQL). TCP/IP access must be enabled. A system administrator SQL login must be used for the FactoryTalk EnergyMetrix software installation.
- You must have machine administrator privileges to install FactoryTalk EnergyMetrix software.

Bulletin 1413 - Capacitor Bank Controller

Overview

Designed for various capacitor bank control applications, the Allen-Bradley Bulletin 1413 Capacitor Bank Controller is a pre-engineered, PLC-based solution. It combines standard, off-the-shelf, Allen-Bradley hardware with application programming necessary to perform power factor correction in one single package. The Capacitor Bank Controller is unique in its flexibility and adaptability compared with other standard, fixed-function capacitor control products available in the market today. Start using this powerful, affordable, and easy to use solution to help reduce power factor penalties, kW demand charges, and release kVA loading.

The Capacitor Bank Control system consists of a MicroLogix™ 1400 controller, one or more PowerMonitor 1000 units, a standard that is built-in the MicroLogix 1400 controller, and an optional Human-Machine Interface (HMI). Pre-engineered programming in the controller gathers real and reactive power data from up to four power feeds including utility feeds and/or generators. The logic operates on the data in standard engineering units of kVAR and kW and acts to minimize imported and exported reactive power by switching up to 10 individually-switched capacitor groups. This strategy controls power factor within specified limits while providing the flexibility to modify the system to meet the specific requirements of the application.

Product Selection

Cat. No.	MicroLogix 1400	PowerMonitor 1000	PanelView Component C600
1413-CAP-ME	Ethernet	Ethernet	None
1413-CAP-ME-PE	Ethernet	Ethernet	

Benefit

- Basic and advanced control of capacitor banks to help reduce power factor penalties and kVA demand charges
- Ability to monitor and control VARs to multiple feeders
- Advanced VAR control modes for precise power factor control
- Simple addition of I/O for additional steps and functionality (for example, alarming)
- Local and remote communication capabilities for programming, viewing, sending information, and alarming for real time electrical system status
- Easy to configure and view through an optional display module
- Full functioning real time power and energy monitoring (hundreds of parameters captured, logged, and available within the PowerMonitor unit for taking action and/or passing to other systems displayed locally and/or remotely)
- Open system architectures using the familiarity with PLCs and standard off-the-shelf hardware
- Seamless integration into Rockwell Automation and third- party HMI and SCADA systems

Features

- Auto and/or manual step size configuration
- Discharge timer on each step
- Selectable operating modes
 - Manual operation
 - First-in, Last-out (FILO)
 - Balanced – Distribute usage of capacitor steps
 - Best Fit – Finds best match of capacitor step size to system kVA needs
- Alarms
 - Bad step, indicates blown fuse, capacitor failure
 - Target power factor not achieved
 - High/Low voltage
- Power monitor data concentrated into the MicroLogix controller and displayed with an optional HMI
- Metering phase current, line voltage, frequency, real and reactive power, and power factor

Options

- Up to three additional power monitors to aggregate up to four total feeds
- PanelView Component HMI terminal with Ethernet communication
